ACT

Presented by Meet Modi
Code for Communities Chandigarh

WORKING / PROPOSED MVP

Citizens report problems. But who knows what to fix first?

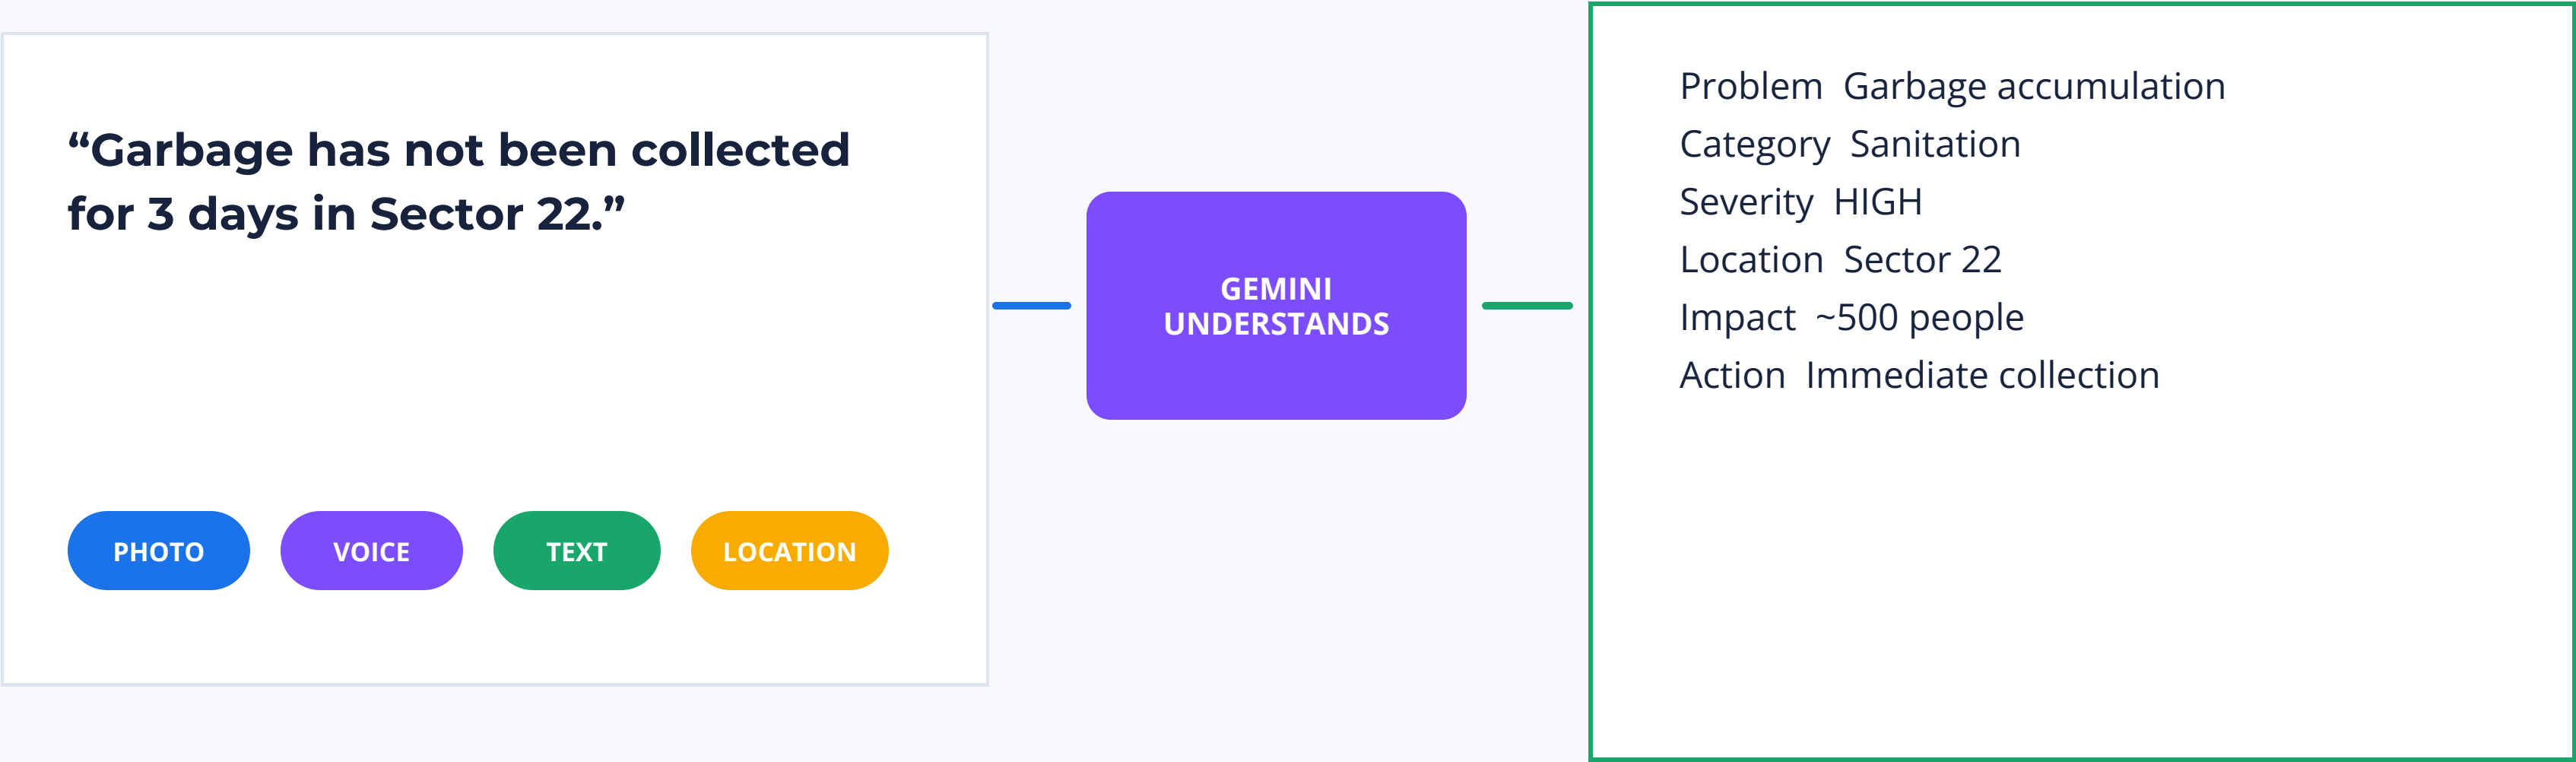

**Garbage • Potholes • Waterlogging
Broken streetlights • Sanitation • Infrastructure**

Multiple channels create unstructured, duplicated reports. Priority is unclear, and historical data rarely becomes an actionable signal.

**The real challenge: turn community complaints
into clear, data-driven priorities.**

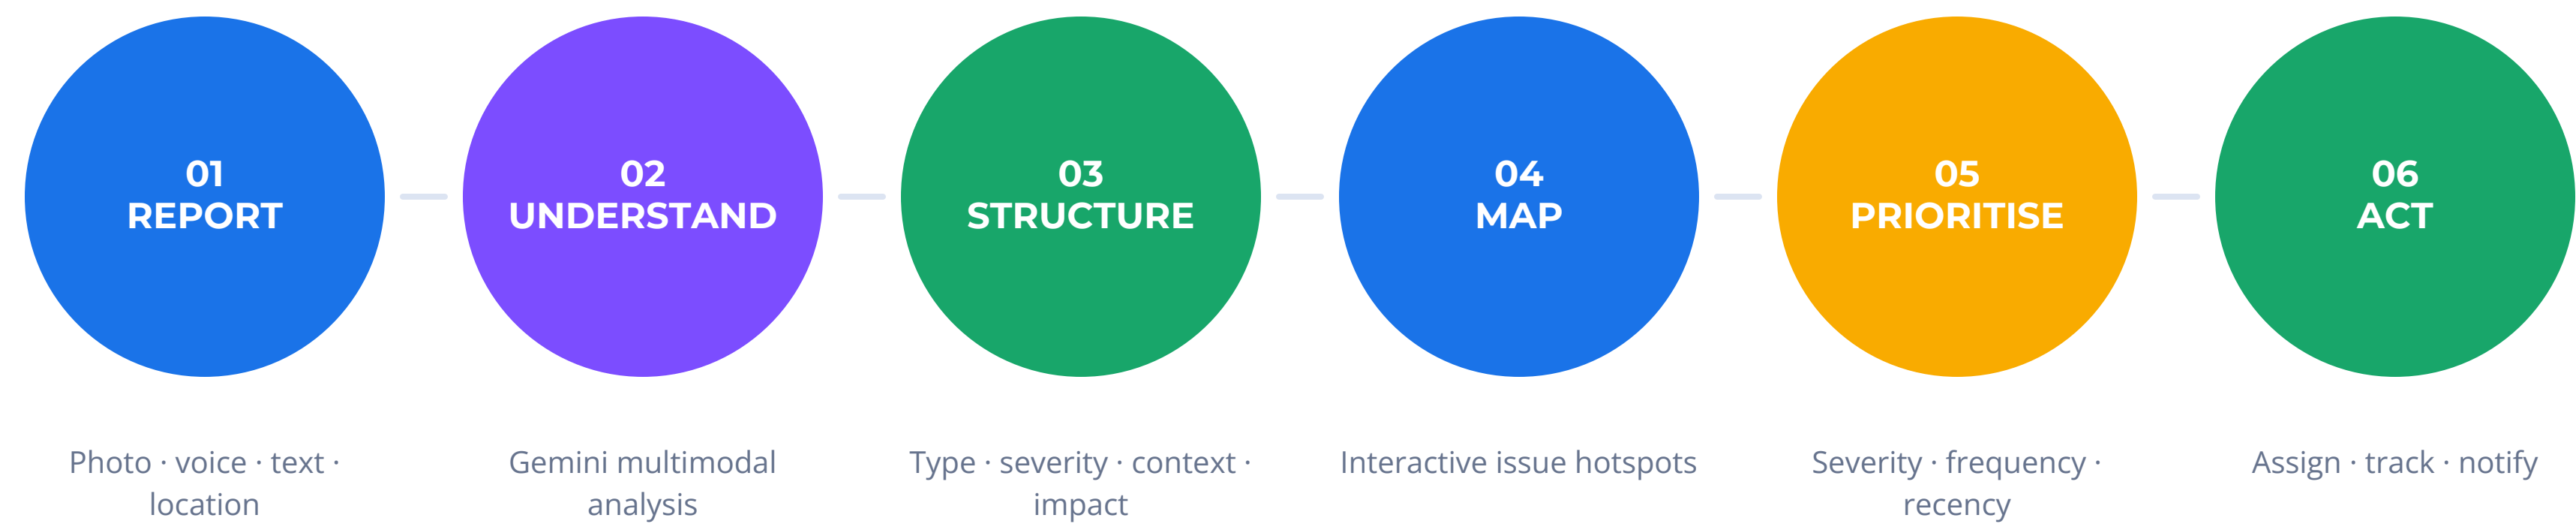

Meet JANSAHAY

Raw complaints become actionable community intelligence.

From citizen report to community action

One platform. One intelligence layer. Faster community response.

Messy reports in. Actionable intelligence out.

Photo + voice + text + location are understood together — not as separate fragments.

EXTRACTS

Issue type · Category · Severity
Context · Location · Potential impact
Recommended action

Gemini API · Google AI Studio

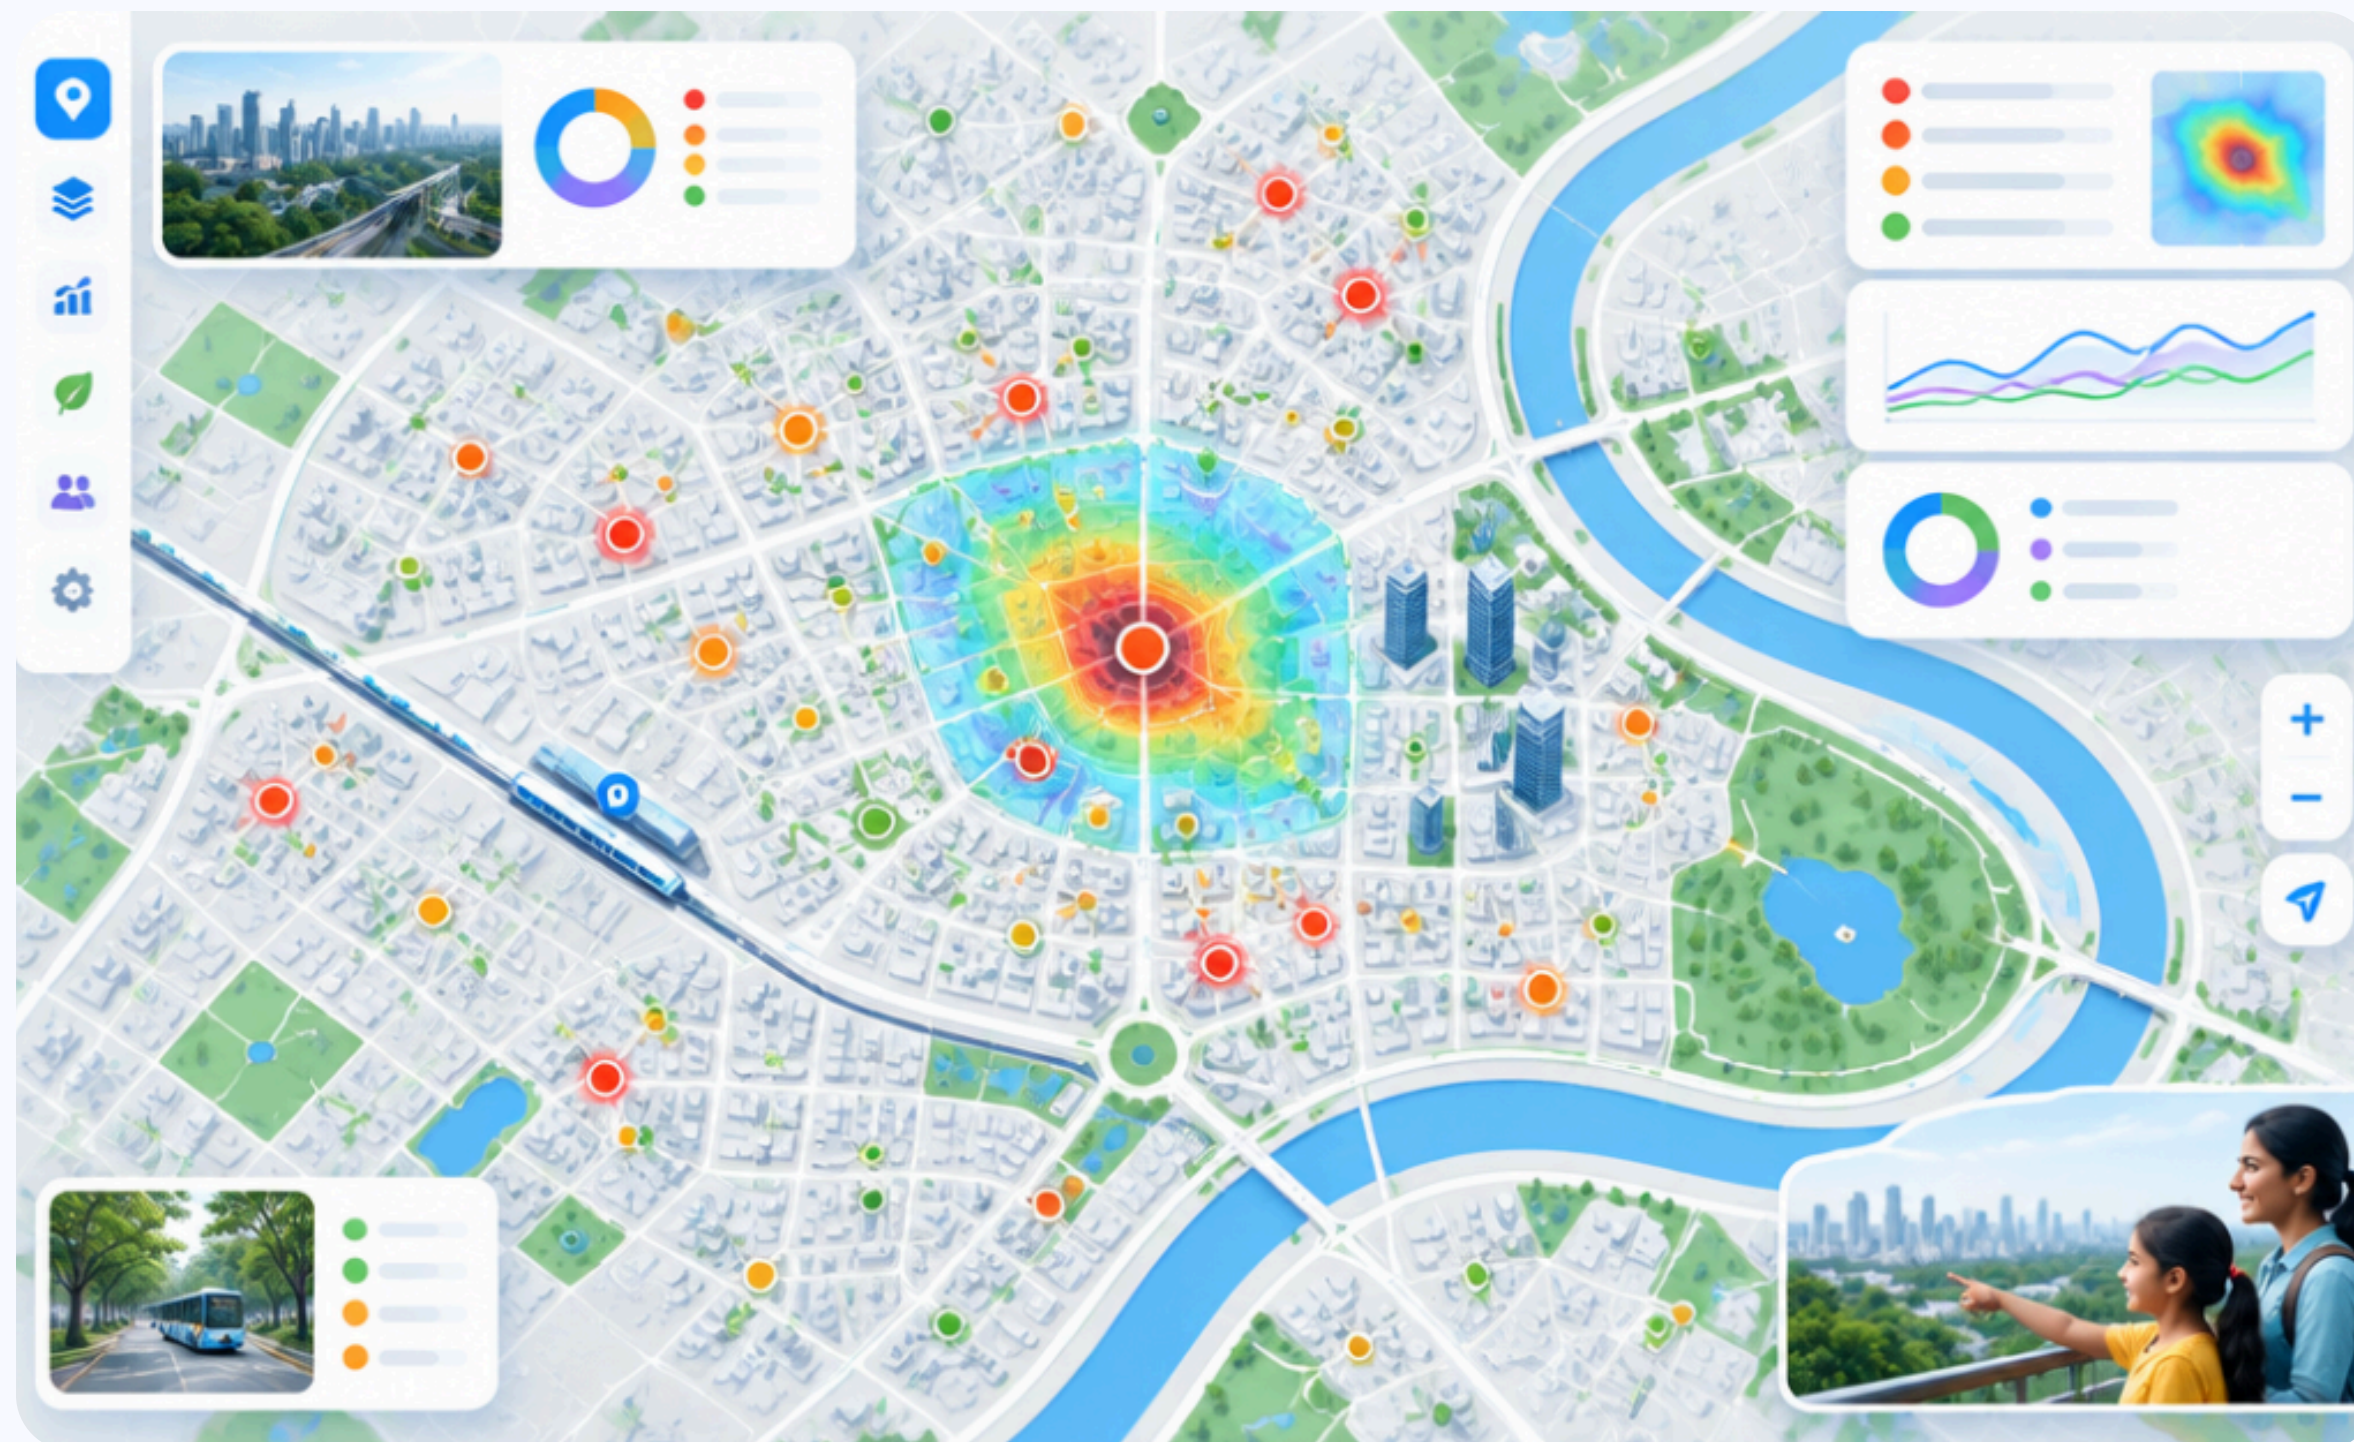

Not every complaint has the same urgency

#1	Garbage · Sector 22	47 reports	HIGH
#2	Waterlogging · Sector 18	31 reports	HIGH
#3	Streetlights · Sector 15	68 reports	MEDIUM
#4	Potholes · Sector 21	21 reports	MEDIUM

WHY #1?
Garbage accumulation in Sector 22 is prioritised due to rising complaints near a school and residential zone.

Signals: severity · report volume · location · community impact · recency · recurrence

See problems where they actually happen

SECTOR 22
142 complaints
+42% sanitation
High-priority hotspot

Filter by location, category, severity and resolution status. Reveal clusters and nearby recurring problems.

CRITICAL

RESOLVED

One click → a complete community situation report

WEEK · 5-11 OCTOBER

CRITICAL ISSUES

Waste management · Sector 22

Waterlogging · Sector 18

TREND

Sanitation complaints increased 38%

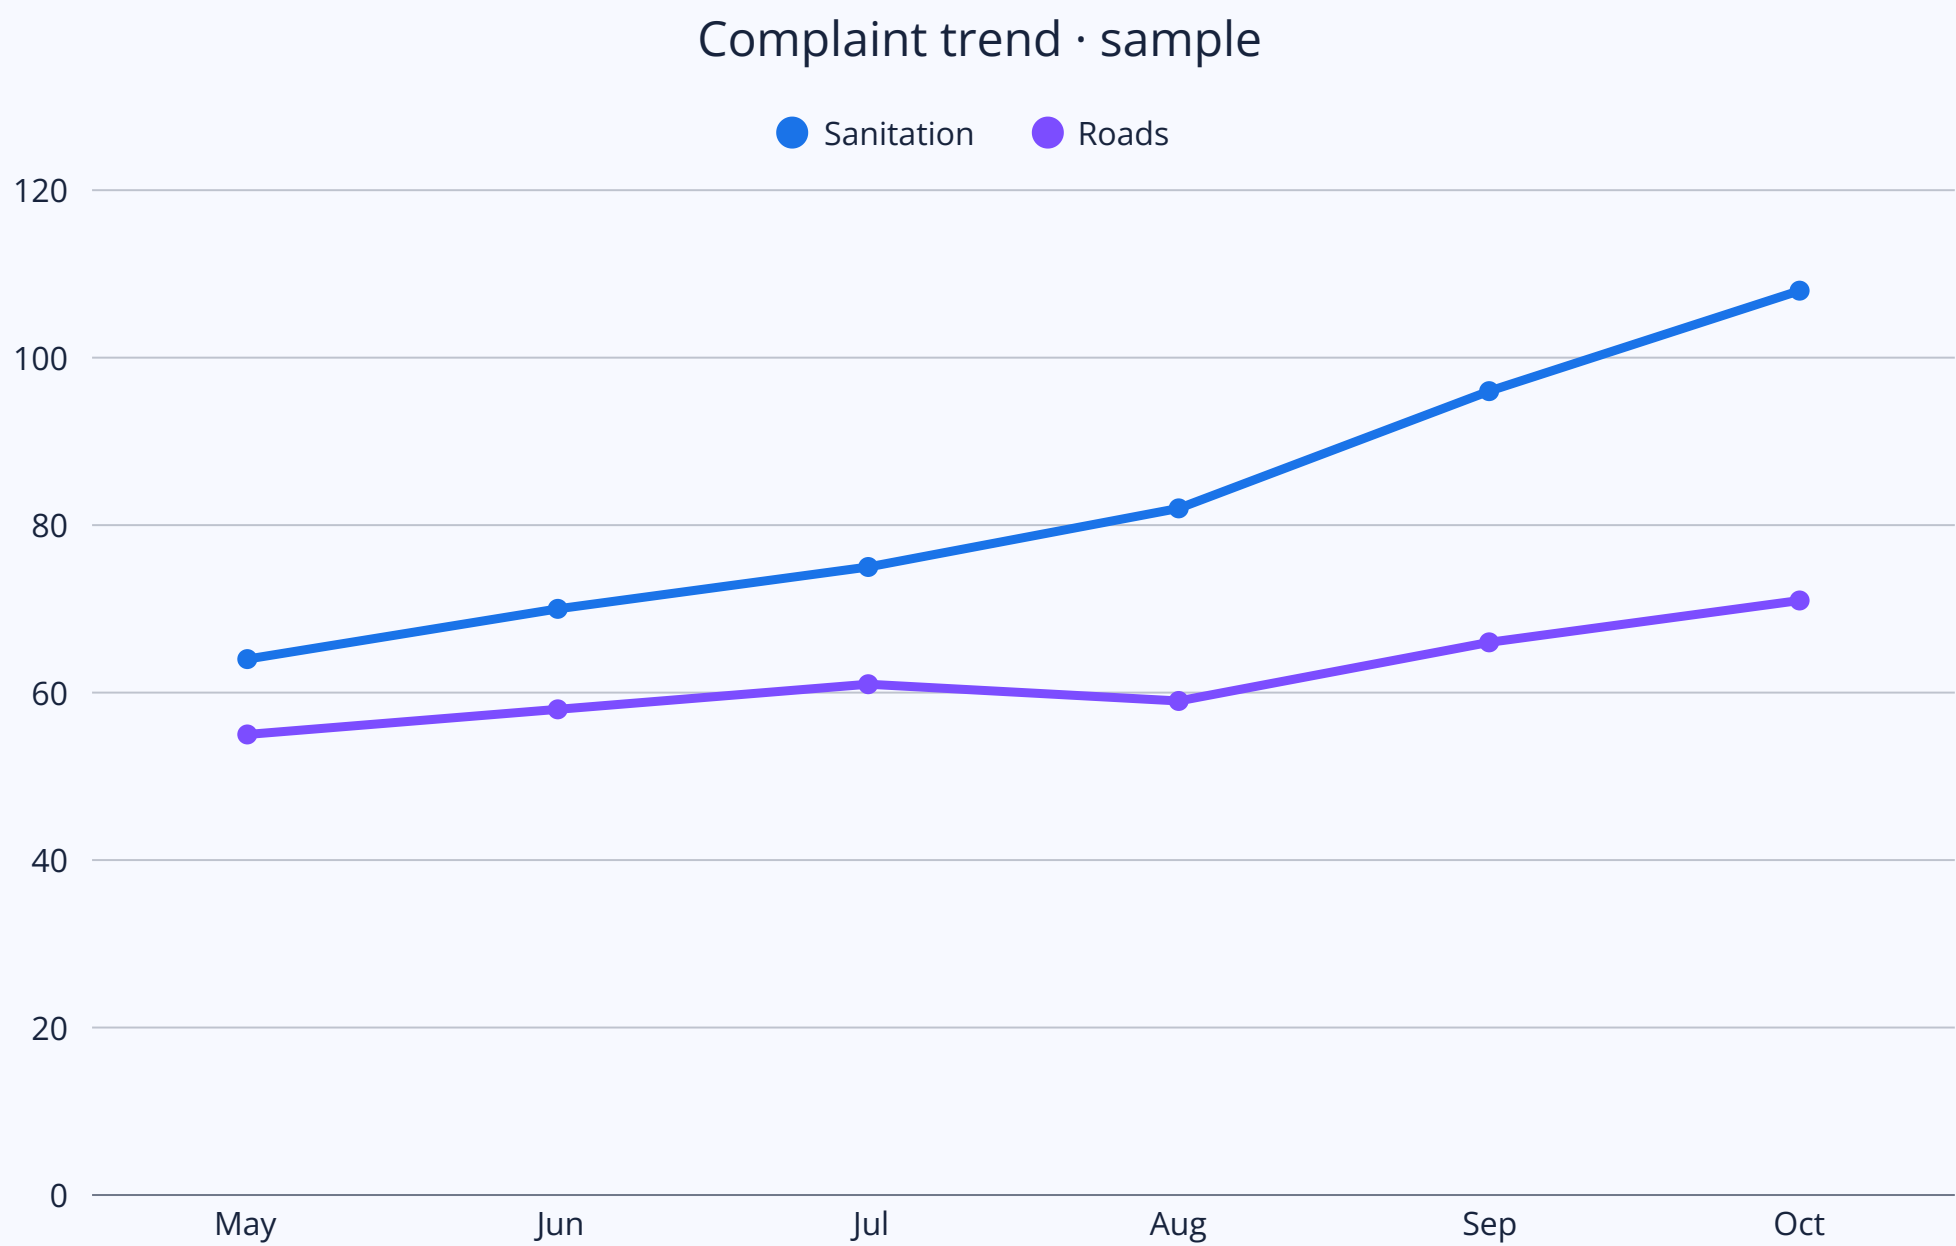

RECOMMENDED ACTIONS

- 01 Deploy sanitation team to Sector 22
- 02 Inspect drainage near Sector 18
- 03 Repair reported streetlights

Powered by Gemini + historical data + BigQuery

Concise intelligence replaces manual complaint review.

From individual complaints to long-term insight

SECTOR 22
142 total complaints · sanitation +42% · recurring hotspot

RECURRING HOTSPOT

Move from reactive handling to proactive, data-driven community planning.

From AI recommendation to real-world action

Garbage · Sector 22

Assign → SANITATION

HIGH

Waterlogging · Sector 18

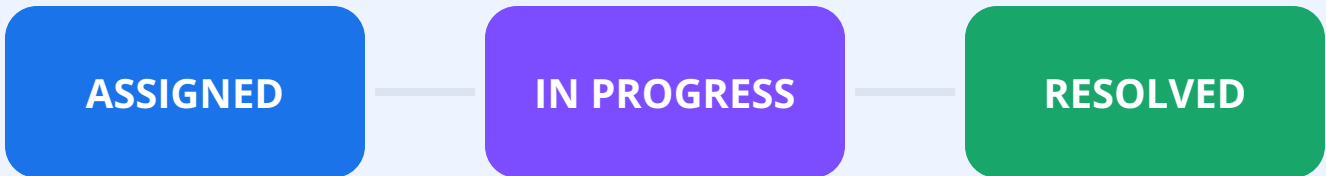

Assign → ENGINEERING

HIGH

Streetlight · Sector 15

Assign → ELECTRICAL

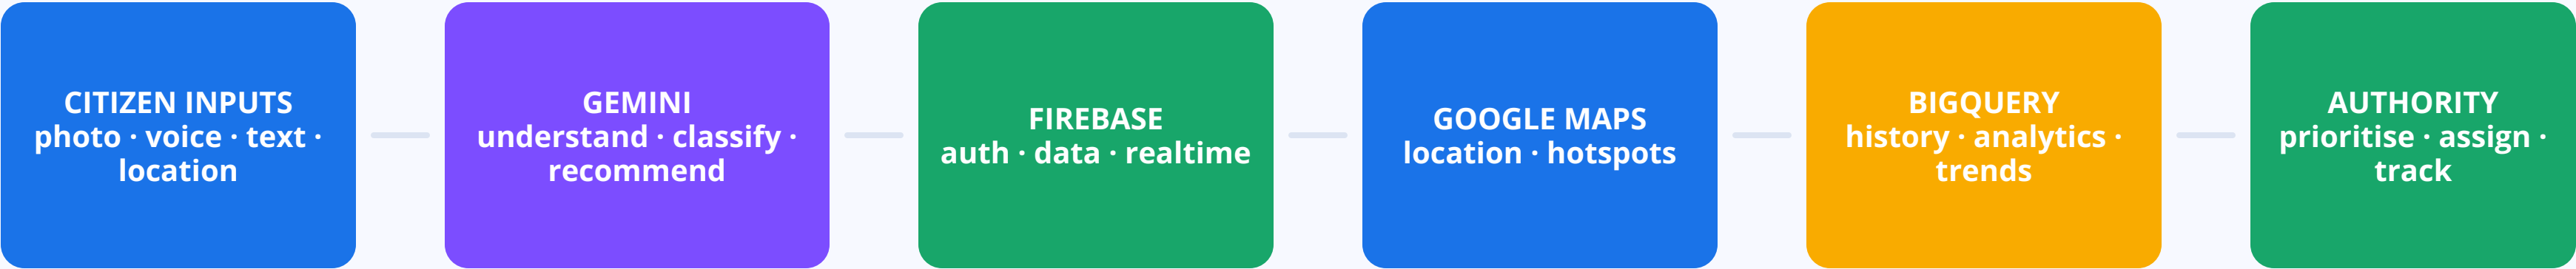

MEDIUM

Firebase enables authentication, real-time data, live status and rapid prototyping.

AI recommends. Humans decide. Departments act.

Built with Google's AI & Cloud ecosystem

Google Cloud provides the scalable foundation across the workflow.

Vertex AI · future / optional

Google AI is the intelligence layer — not an add-on.

Building faster, safer & more responsive communities

FOR CITIZENS

Easy photo, voice and text reporting
Resolution visibility · multilingual potential

FOR AUTHORITIES

Priorities · hotspots · faster coordination
Historical trends · transparent tracking

01 · MVP
Gemini · Maps · Firebase

02 · INTELLIGENCE
BigQuery · hotspots · trends

03 · SCALE
Multilingual · voice-first

04 · INTEGRATE
Municipal systems · public data

Technology should not only understand problems.
It should help communities solve them.

Thank you · Meet Modi
